Intelligent design (ID) is a pseudoscientific argument for the existence of God, presented by its proponents as "an evidence-based scientific theory about life's origins". Proponents claim that "certain features of the universe and of living things are best explained by an intelligent cause, not an undirected process such as natural selection." ID is a form of creationism that lacks empirical ...

From Table 1, it can be observed that these concepts have been widely studied and implemented. They share some similarities, such as the aims of intelligent/smart decision-making in manufacturing systems and the optimization of various manufacturing resources. Several technologies, such as the IoT, cloud computing, and BDA, are used within these three main concepts.
