Nitrogen dioxide is the chemical compound with the formula NO₂. It is one of several nitrogen oxides. NO₂ is an intermediate in the industrial synthesis of nitric acid, millions of tons of which are produced each year which is used primarily in production of fertilizers. At higher temperatures it is a reddish-brown gas that has a characteristic sharp, biting odor and is a prominent air pollutant.

Nitrogen dioxide - Wikipedia

3.1. Introduction. There are two main classes of protein in milk, which can be separated based on their solubility at pH 4.6 at 20°C. Under these conditions, a high proportion of the proteins, called caseins, precipitate, while the proteins that remain soluble are known as serum proteins or whey proteins.

The caseins: Structure, stability, and functionality

Amphibian diversity is highest in the tropics, especially in the Amazon. Brazil has the most described species, over a 1,000 species. By contrast, the United States is nearly the same size as Brazil with about a third of the amphibian species (although it has many more salamanders!).

Introduction. Plant growth promoting rhizobacteria (PGPR) are a heterogeneous group of bacteria that can be found in the rhizosphere, at root surfaces and in association with roots, which can improve the extent or quality of plant growth directly and or indirectly.

Screening of free-living rhizospheric bacteria for their

Greenpeace will never stop fighting for a greener, healthier world for our oceans, forests, food, climate, and democracy—no matter what forces stand in our way.

Greenpeace

Climate change denial, or global warming denial, is part of the global warming controversy. It involves denial, dismissal, or unwarranted doubt that contradicts the scientific opinion on climate change, including the extent to which it is caused by humans, its impacts on nature and human society, or the potential of adaptation to global warming by human actions.

Climate change denial - Wikipedia
