DuPont's Fusabond® is a family of functional polymers that have been modified to help bond together dissimilar polymers.

Functional Polymers | DuPont's Fusabond® | DuPont USA

Polyvinyl chloride (/ ˈ ɒ l i v a ɪ n ˈ ɪ k l ɔː r aɪ d /; colloquial: polyvinyl, vinyl; abbreviated: PVC) is the world's third-most widely produced synthetic plastic polymer, after polyethylene and polypropylene. About 40 million tonnes are produced per year. PVC comes in two basic forms: rigid (sometimes abbreviated as RPVC) and flexible.

Chlorinated polyvinyl chloride (CPVC) is a thermoplastic produced by chlorination of polyvinyl chloride (PVC) resin, which is significantly more flexible and can withstand higher temperatures than standard PVC. Uses include hot and cold water delivery pipes and industrial liquid handling. CPVC, as PVC, is deemed safe for the transport and use of potable water, potable meaning water used for ...

Chlorinated polyvinyl chloride - Wikipedia

The use of plastic materials by the piping industry accounts for a significant volume of polymers. In this segment PVC represents the largest worldwide market for plastics. PVC is often used in plastic pressure pipe systems for pipelines in the water and sewer industries because of its inexpensive ...

A two-step process forms reinforcing phenolic resins and thus they are often referred to as •two-step resins. • The first step combines a phenol with formaldehyde to form

reinforcing phenolic resins - Akrochem Corporation

Every activity in modern life is influenced by plastics and many depend entirely on plastics products. Imagine cars without synthetic bumper, dashboards, steering wheels and switches; medicine without plastic hypodermic syringes and artificial hip joints. And what about telecommunications, dependent on plastic telephones, circuit boards and cable insulation.

Plastics Additives

Vehicle standards information PUBLISHED 8 NOVEMBER 2013

PET and PET variants resins which have a crystalline melting point between 225 and 255C are preferred. Materials of a lower melt point or non-crystalline materials often become sticky in the reclaimers•™ pre-extrusion dryer when the dryer is operated at PET temperatures and prevent the material from flowing through the process.

Spacing \hat{t} is the ratio of distance between center point of turns divided by the wire diameter. So a closely wound coil using 0.25 mm wire would have approximately 10% wider diameter from varnish, that makes it $0.275 \text{ mm} / 0.25 \text{ mm} = 1.1$ spacing ratio.
