A mathematical model must be able to address universal concepts, such as, for instance, the conservation of mass or the momentum of a fluid, or the moment of inertia of a structure; moreover, in order to obtain a successful numerical simulation, it is necessary to define which level of detail must

mathematical aspects of the fine structure of the trajectories, and some concerned with the practical implications and applications. This is an interpretive review of them. THERE are many situations, in many disciplines, which can be described, at least to a crude first approximation, by a simple first-order difference equation.

The Teachers College Mathematical Modeling Handbook is intended to support the implementation of the CCSSM in the high school mathematical modeling conceptual category. The CCSSM document provides a brief description of mathematical modeling accompanied by EE star symbols M\*N designating modeling standards and standard clusters.
