In biochemistry, heat shock is the effect of subjecting a cell to a temperature that is greater than the optimal temperature range of function of the cell. Heat shock refers to cellular exposure to rapid stress changes such as temperature, toxins, oxidative stress, heavy metals, and pathogenic infections. Specifically temperature induced heat shock, even of a few degrees, has the potential to ...

The molecular chaperones Hsp70 and Hsp90 form a fast-acting relay team to prepare proteins to fold into their active state on their own. Hsp70 recognizes short hydrophobic stretches (yellow ...

Folding, modification, and degradation of proteins The life of a protein can briefly be described as: synthesis, folding, modification, function, degradation.

Aging is associated with a decline in mitochondrial function and the accumulation of abnormal mitochondria. However, the precise mechanisms by which aging promotes these mitochondrial alterations and the role of the latter in aging are still not fully understood. Mitochondrial dynamics is a key process regulating mitochondrial function and quality.

Cisplatin, cisplatinum, or cis-diamminedichloroplatinum (II), is a well-known chemotherapeutic drug. It has been used for treatment of numerous human cancers including bladder, head and neck, lung, ovarian, and testicular cancers.

CHAPTER 2 Protein Structure 29 As described in Chapter 1, the Watson-Crick Model helped to bridge a major gap between genetics and biochemistry, and in so doing helped to create the discipline of molecular biology.

The study of protein misfolding and aggregation saw resurgence in the last decade. Aggregation is the main cause of several human neurodegenerative diseases which makes this field as the leading edge in the science today.

Abstract. Tyrosine kinases are important mediators of the signaling cascade, determining key roles in diverse biological processes like growth, differentiation, metabolism and apoptosis in response to external and internal stimuli.

Tyrosine kinase – Role and significance in Cancer

Submission Method A journals make the final published version of all NIH-funded articles available in PubMed Central (PMC) no later than 12 months after publication without author involvement. The start date shown for each journal is the earliest publication date that meets this requirement. Enter a journal name below to see if it uses Submission Method A.
