

### **the menopause a time pdf**

During the transition to menopause, changing hormone levels can affect your menstrual cycle and cause symptoms like hot flashes and problems sleeping. As you get closer to menopause, you may notice other symptoms, such as pain during sex, urinary problems, and irregular periods. Talk to your doctor or nurse about your symptoms.

### **Menopause symptoms and relief | womenshealth.gov**

Menopause is the time in a woman's life when her period stops. It usually occurs naturally, most often after age 45. Menopause happens because the woman's ovaries stop producing the hormones estrogen and progesterone.

### **Menopause | Menopause Symptoms | MedlinePlus**

Menopause is the time when your menstrual periods stop permanently and you can no longer get pregnant. Some people call the time leading up to a woman's last period menopause.

### **Menopause | womenshealth.gov**

Menopause, also known as the climacteric, is the time in most women's lives when menstrual periods stop permanently, and they are no longer able to bear children. Menopause typically occurs between 49 and 52 years of age. Medical professionals often define menopause as having occurred when a woman has not had any vaginal bleeding for a year. It may also be defined by a decrease in hormone ...
